SUMMARY

Certified Salesforce Administrator with a strong foundation in Sales Cloud, Service Cloud, and Experience Cloud. Technically adept at streamlining business processes through Flow Builder and complex automation logic, including SLA management via Case Auto-assignments and Escalation methodology, with expertise demonstrated through Trailhead Superbadges and personal projects. Proven ability to maintain high data integrity and security through least-privilege access models, Permission Sets, and Sharing Rules. Skilled at translating stakeholder needs into actionable insights via Reports and Dashboards.

TECHNICAL SKILLS

- **Salesforce CRM & Admin:** Flow Builder, Lightning App Builder, Lightning Experience, Sales Cloud, Service Cloud, Users, Profiles, Roles, Permission Sets, Record Types, Page Layouts, Email Templates, List Views, Queues, Groups, Validation Rules, Approval Processes, Flows, Workflow rules, Login Policies, Chatter, Reports and Dashboards, Data Loader, Data Import Wizard, Data Mapping, Data Cleansing & Validation, AppExchange Tools, Objects, Fields, Relationships (Lookup/Master-Detail), Schema Builder, System Testing & Troubleshooting
- **Programming Languages:** Python, SQL, Java
- **Data Analysis & BI:** Pandas, NumPy, Statistical Analysis, A/B Testing, Power BI, Tableau, Matplotlib, Seaborn, Excel (VBA, Macros, Pivot Tables)
- **Machine Learning (ML):** Scikit-learn, XGBoost, Logistic Regression, Random Forest
- **Cloud Platforms & ETL:** AWS (S3, Lambda, Redshift, Glue), Snowflake, Azure (ADLS, Synapse, Data Factory), PySpark, Apache Airflow, Salesforce, Draw.io
- **Databases:** MySQL, BigQuery, Oracle, PostgreSQL
- **Version Control & Management:** Git (CI/CD), GitHub, Jira, MS Project

CERTIFICATIONS

- Salesforce Certified Platform Administrator
- Salesforce Certified Platform Foundations
- Microsoft Certified: Power BI Data Analyst Associate - Exam Prep
- Azure Databricks and Spark SQL (Python)
- Microsoft Power BI Desktop for Business Intelligence

EDUCATION

Concordia University
Master of Applied Computer Science
SRM Institute of Science and Technology
Bachelor of Technology in Computer Science

Montreal, Canada
Sep 2023 – May 2025
Chennai, India
Jun 2019 – May 2023

PROJECTS

TravelBuddy Customer Service & Self-Service Portal

Dec 2025

Service Cloud & Experience Cloud Implementation

Experience Builder, Permission Sets, Service Console

- Built a public-facing help center using Data Categories and Topic Management, configuring Audience visibility to ensure Guest users can only view articles while requiring login for Case management and Support access.
- Streamlined case handling by combining Assignment and Escalation Rules for SLA management that automatically add specialized Case Teams to incoming site requests.
- Locked down org security using the Minimum Access Profile paired with custom Permission Sets and customized Page layouts, enabling the Service Console for agents to manage cases.

Flow Fundamentals Superbadge

Nov 2025

Salesforce Administration Project

Flow Builder, Decision Elements, Task/Queue Management

- Automated Order Fulfillment by configuring a Flow with Decision logic to create specific Tasks for the Fulfillment Queue based on the number of items in an order.
- Streamlined Customer Communication by updating a Screen Flow to dynamically populate Email Templates and tracking the Last Outreach date on the Contact record.
- Enhanced the Loyalty Program by implementing complex Assignment logic (using CASE formulas) to calculate and award bonus Loyalty Points based on customer status.

Data Protection Superbadge

Oct 2025

Salesforce Administration Project

Reports, Data Import Wizard, Scheduled Data Export, Permission Sets

- Investigated a Contact Email data corruption incident by analyzing Contact Field History Tracking and building Contacts with History reports to identify the integration user responsible for the updates.
- Developed and executed data mapping strategies to accurately restore corrupted records, performing data clean up and validation via Data Import Wizard to ensure data integrity post-migration.
- Implemented a monthly scheduled data export (12:00 AM on the last day of each month) to establish an org-wide backup and disaster recovery strategy.
- Prevented future data corruption by enforcing least-privilege access, updating the Marketing Integration User permission set to remove Edit access on the Contact Email field while maintaining Read access.

Automated Medallion Architecture Pipeline

Sep 2025

Data Infrastructure & ETL

Databricks, PySpark, Azure ADLS Gen2, Delta Lake, Parquet

- Engineered and automated an end-to-end cloud-based Medallion Architecture (Bronze → Silver → Gold) using PySpark on Databricks, leveraging Azure Data Lake Storage Gen2 for scalable data transformation.
- Managed secure data ingestion by mounting Azure ADLS Gen2 to Databricks, ensuring seamless and scalable processing of raw data.
- Optimized data accessibility for BI by configuring JDBC/ODBC connectivity to Power BI, enabling secure, real-time access to curated Delta Lake datasets for business intelligence and ad-hoc reporting.
- Executed rigorous data testing and validation across the pipeline, performing reconciliation of transformed datasets and ensuring high data quality and integrity.

Bank Loan Report Dashboard

Jul 2025

Data Visualization & BI

Excel, Power Query, Pivot Tables, Charts, Maps

- Developed an interactive Excel dashboard to monitor key lending KPIs (loan applications, funding, repayments, interest rate, DTI), including Month-to-Date (MTD) and Month-over-Month (MoM) performance comparisons.
- Utilized Power Query for efficient data transformation and cleansing from source data into a structured model for insight driven reporting.
- Created dynamic visuals (maps, line charts, donut/tree maps) to effectively segment and analyze loans by status, state, term, and purpose, enhancing location-based business insights.

EXPERIENCE

Arodo India Pvt. Ltd.

May 2022 – Jul 2023

Junior Data Analyst

MySQL, PostgreSQL, Power BI, DAX, Python, Excel, Jira

- Analyzed production output, packaging efficiency, and service performance data using MySQL and PostgreSQL (joins, aggregations) to support weekly and monthly operational reporting.
- Built and maintained Power BI dashboards with DAX measures to track KPIs such as machine utilization, output vs targets, downtime trends, and packaging performance for data-driven production reviews.
- Performed trend and root-cause analysis on historical production and efficiency data, identifying recurring bottlenecks and contributing to a 13% improvement in overall packaging productivity.
- Cleaned and transformed data from ERP exports and Excel logs using Python (Pandas) and Excel (Power Query, Pivot Tables), reducing manual reporting effort and improving data consistency.
- Performed data reconciliation and validation across ERP systems, SQL tables, and Excel sources to ensure KPI accuracy and logged discrepancies and reporting issues in Jira for resolution.
