- Used Razorpay API for payment in webapp like UPI and PAYTM and more
- Design & implement robust & extensible code modules. Focused on Back-end development, providing mentorship and coaching to 6 interns
- Maintained admin page and add features like Auth(login/signup)
- Hosted in Heroku than sifted to PythonAnyWhere
- Used: Python, Django, HTML/CSS Razorpay API

PROJECTS

Django Stockguide - <https://github.com/Aditya-aot/Hackathon-ION>

- Built a responsive web app using Django that allowed users to guide and predict stocks, as it's great for beginners who are new in stocks and you will get the latest news about stocks
- Used Machine Learning (Random Forest Algorithm) to predict upcoming stockprice and produce clean, efficient code based on specifications
- Web scraping of yahoo finance news to get the latest news on stocks in with the help of BeautifulSoup Auth(login/signup) function for user and used Data Structures & Algorithms.
- Used: Python, Django, HTML/CSS · Webapp is hosted with Heroku

Covid-19 tracker Django(API) - <https://github.com/Aditya-aot/Covid-19-tracker-Python-Django>

- API is used to get data about Covid-19
- Auth(login/signup) function for user
- Webapp is hosted with Heroku
- Used: Python, Django, HTML/CSS
