EXPERIENCE & CERTIFICATIONS :

Work Experience : I am Salesforce Certified member having good working experience from July 2022 – Present.

Certification : (1) Salesforce Certified Platform Developer I
(2) Salesforce Certified Associate

Internship : Worked as a Intern with a role of Salesforce Admin and Developer in Vigo Technoworld Pvt.Ltd.

PROJECT DETAILS :

Project Name : Educational Training Management

Domain : Education

Role : Salesforce Admin and Developer(Intern)

Description : I am working on a project which is education training management. In this project I manage data in a cloud based software known as Salesforce. Salesforce is a CRM which is widely used for automation purpose that is we can easily manage the records in a effective manner. I also implement this process in my project where we manage the data of those students and faculties who enrolled their name in this training system.

Responsibilities :

- I create some custom object and fields to manage data according to the requirements.
- Using Validation Rules and also create some Formula fields to restrict the user by filling the unnecessary data.
- Fetching records from external service to the Salesforce Org with the help of DataLoader.

- Handling external and internal security means giving access to the Users according to their Role and Profile.
- Creating automation process by using Workflow Rules and Lightning Flow.

Project Name : Course Management

Domain : Education

Role : Salesforce Admin and Developer(Intern)

Description : In this project the user add courses and that courses successfully added to the Salesforce which means saving the data from Frontend to Backend. To achieve this functionality I used LWC Component in Visual Studio Code (VS code) and connected to my Salesforce Org.

Responsibilities :

- By using HTML, Javascript in VS code which the user wants to add the course and automatically saving to the Salesforce Org.
- Binding data from Javascript to HTML.
- Also creating the Apex class which used to store data in the org.
- Navigating the data from database I used NavigationMixin.
- Decorators and Annotations also used according to the requirements.
- Handling all functionality in one Component.
