SOQL

HTML/CSS

Javascript

Apex

Java

C++

Certificates

- Salesforce certified Administrator
- Salesforce certified platform developer 1
- AWS cloud partitioner
- Salesforce JavaScript Developer 1

Projects

Project Management System

This application is designed for project management purposes, enabling companies to effectively oversee the lifecycle of their projects. Within this application, companies can generate records for clients and projects, as well as establish and maintain the intricate connections between them.

Project Management holds the capability to initiate fresh requirements, as well as allocate tasks to employees. As employees submit their work for approval upon completion, Project Managers can review and either accept or decline the submissions based on their assessment.

If Task assigned auto generated mail will be send to employee.

Tech Stack :

Data Modelling , Flows, Approval Process, Experience Site, LWC

We used LWC for creating Datatable of projects and apply searching functionality
