CAREER OBJECTIVE

As a final-year B.Tech student in Computer Science and Engineering, I am eager to apply my strong foundation in programming, algorithms, and statistical analysis to the field of Data Science. I have developed expertise in data manipulation, machine learning, deep learning, and data visualization through various academic projects and hands-on experience with tools such as Python, TensorFlow, Scikit-learn, and SQL. My goal is to leverage these skills to analyze large datasets, extract actionable insights, and build predictive models that solve real-world challenges. I am looking for an opportunity to work in a dynamic and growth-oriented organization where I can continue to enhance my knowledge, contribute to innovative projects, and develop impactful solutions in data science and machine learning.

EDUCATION

Govt. Mahila Engineering College, Ajmer <i>B Tech, Computer Science</i> • CGPA: 8.01	2025
Govt. Polytechnic College, Ajmer <i>Diploma, Electrical Engineering</i> • CGPA: 6.49	2022
D.A.V Centenary Public School, Ajmer <i>X</i> • CGPA: 6.8	2015

ACADEMIC ACHIEVEMENTS

VARCHAS'24 IIT-Jodhpur Participate in Chess

MNIT Jaipur In 2023 i was win and secured 3rd position on Chess tournament

SUMMER INTERNSHIP

Regex (Internship)
2024

Jul 2024 - Aug

Data Science with ML and DL

- Built/deployed ML/DL models (TensorFlow, Keras) for predictive analytics, automating tasks & boosting accuracy
- Optimized algorithms (regression, neural networks, NLP) to solve classification/prediction challenges, enhancing business outcomes

Leveraged statistical modeling, feature engineering, and visualization to drive data-driven decisions.

Unstop (Training)

Jul 2023 - Aug 2023

- Designed and developed responsive user interfaces using HTML5 and CSS3, ensuring cross-browser compatibility and mobile optimization
 - Built dynamic and interactive web applications with React.js, leveraging state management and reusable components for efficient development

PROJECT

Stock Prediction using DASH

- Developed an interactive stock prediction dashboard using Dash, integrating machine learning (ARIMA, VAR) and deep learning (LSTM) models to forecast stock prices and visualize trends
- Implemented end-to-end data pipelines for collecting, preprocessing, and modeling historical stock data, enabling real-time and insightful visual analytics for stakeholders

Job Recommendation System

- Pandas and NumPy: For data manipulation and preprocessing, cleaning datasets of job postings and user profiles.
- Scikit-learn: For implementing traditional machine learning algorithms such as collaborative filtering, classification models
- Natural Language Processing (NLP): Used for analyzing text data such as resumes and job descriptions.
- Collaborative Filtering: A technique used to recommend jobs based on user preferences and behaviors by finding similar users.

Expenses Tracker

- Expense Categorization: Users can categorize their expenses into predefined groups like food, transportation, utilities, entertainment, etc., or create custom categories.
- Income vs. Expense Tracker: Users can track their income and expenses, and visualize the balance between the two, helping them manage their finances better.
- Recurring Expenses: Supports tracking of regular, recurring expenses like subscriptions, rent, etc.

Movie Finder

- Movie Search: Allows users to search for movies by title, genre, release year, or actor.
- Movie Details Page: Displays detailed information for each movie, including its title, plot, release year, director, cast, and user ratings.
- Movie Ratings: Shows average ratings from popular platforms like IMDb or Rotten Tomatoes.

SKILLS

- **Technical:** Python, Machine Learning, Deep Learning, Git-hub, Linux, MS Excel, MS Office, HTML, CSS, Cloud-Computing
- **Non-Technical:** Fast learner, Critical Thinking Ability, Team Work Proficiency, Good Listener
- **Certificates:** Data Analytics, Introduction to Cloud Computing, Basics of Python Programming, Data Science, Web-Development
