76.56%

Projects

- **TechTrack Service System - Developer**
Description:
This is a leading company in the manufacturing sector, specializing in high-tech machinery and industrial automation solutions. Known for its cutting-edge technology and commitment to customer service, the company provides comprehensive support and maintenance services for its diverse range of products. This Cloud project is designed to optimize customer service operations.
Key Deliverables:
 1. Interacting and communicating with the client to understand the business requirements.
 2. Implemented omnichannel to manage customer interactions across email channels. Developed custom routing algorithms using omnichannel Flow to efficiently distribute technical service requests to the appropriate engineering teams based on product type.
 3. Created Apex classes and triggers for automating complex service processes which specifically focused on equipment notification systems.
 4. Updated Apex Class to store service requests with the provided customer name and inquiry details.

5. Developed a user-friendly Lightning Web Component for equipment tracking, showcasing equipment in sortable and filterable cards for an enhanced interactive experience.
6. Created apex controller class to fetch relevant data like equipment names, statuses, locations, etc.
7. Created custom fields for equipment details, warranty information, and service histories
