Professional Work History

2.4 years of experience as a DevOps Engineer specializing in CI/CD, cloud infrastructure, and containerized applications.

- Built and maintained CI/CD pipelines using **Jenkins, GitLab CI/CD, and ArgoCD**.
- Containerized and orchestrated workloads with **Docker** and **Kubernetes (EKS, Minikube)**.
- Automated infrastructure with **Terraform, Ansible, and AWS CloudFormation**.
- Monitored and improved system performance with **Prometheus, Grafana, and AWS CloudWatch**.
- Applied **DevSecOps** practices using **SonarQube, Trivy, and Clair** to enhance security.
- Achieved **30% faster deployments**, minimized downtime through monitoring automation, and **reduced cloud costs** using Infrastructure as Code (IaC).

Technical Skills

DevOps & CI/CD

- Jenkins, GitLab CI/CD, GitHub Actions, ArgoCD, GitOps workflows

Cloud Platforms

- AWS (EC2, S3, RDS, IAM, VPC, Route53, CloudWatch, CloudFormation)
- Basic exposure to Microsoft Azure

Containerization & Orchestration

- Docker, Docker Compose, Kubernetes (EKS, Minikube), Helm

Infrastructure as Code & Automation

- Terraform (HCL), CloudFormation, Ansible (Playbooks, Roles), Shell/Bash, Python (basic)

Monitoring & Logging

- Prometheus, Grafana, AWS CloudWatch

Security & DevSecOps

- IAM Policies, AWS Secrets Manager, SSL/TLS, Security Groups, Firewall Rules, SonarQube, Trivy, Clair

Version Control & Collaboration

- Git, GitHub, GitLab, branching strategies, pull requests, code reviews

OS & Networking

- Linux (Ubuntu, CentOS), DNS, HTTP/HTTPS, TCP/IP, SSH, Load Balancing, Nginx

Certifications

- **Generative AI for Executives** – AWS Training & Certification | Completed June-2025
- **AWS Technical Essentials** – AWS Training & Certification | Completed February-2025
- **AWS Compute Services Overview** – AWS Training & Certification | Completed February-2025
- **Introduction to AWS Identity and Access Management (IAM)** – AWS Training & Certification | Completed February-2025

Dench Technologies – Pune, India
Junior DevOps Engineer

May 2023 – Present (2.4 Years)

CI/CD & Automation

- Designed and orchestrated scalable CI/CD pipelines with **Jenkins**, **GitLab CI/CD**, and **ArgoCD**, adopting **GitOps**, reducing deployment cycles to 10 minutes and boosting reliability by 75%.
- Partnered with QA, developers, and product teams to streamline CI/CD, increasing release output from 4 to 8 per month.
- Automated **ERP deployments** on **AWS EKS** using **ArgoCD**, **Terraform**, and **Ansible**, cutting provisioning effort by 3+ hours per release.
- Configured email notifications in pipelines, enabling teams to respond to build failures in under 5 minutes.
- Built **AWS Lambda** functions for repetitive ops tasks, saving 2 hours of daily manual work.
- Deployed **Redis + Celery** for background tasks, reducing execution time from 20 minutes to under 3 minutes.

Cloud Infrastructure & Cost Optimization

- Engineered a 3-tier **AWS** setup (**EC2**, **RDS**, **S3**, **Auto Scaling**, **ELB**) with **Terraform** & **Ansible**, rolling out infrastructure in 30 minutes instead of several hours.
- Refactored **Terraform** modules into reusable blocks, decreasing setup time and cutting maintenance effort by 25%.
- Implemented **AWS Backup** for automated RDS snapshots, shrinking recovery windows from 3 hours to 30 minutes.
- Reduced cloud expenditure by 35% using **AWS Spot Instances** & **Reserved Instances** without impacting performance.

Containerization & Orchestration

- Containerized 10+ applications with **Docker** & **Compose**, reducing local setup from ~60 minutes to 10 minutes.
- Delivered production-ready clusters on **Kubernetes (EKS)** with **Helm**, bringing update downtime down to <5 minutes.
- Tuned application throughput with **Docker workers** and threading, completing batch workloads 4x faster.

Security & DevSecOps

- Integrated **Docker Scout** and **Trivy** in pipelines, accelerating vulnerability scans to 60 minutes from 2+ days.
- Applied **OWASP** practices across infrastructure and delivery, reducing remediation cycles from 14 days to 5 days.
- Embedded **SonarQube** for static analysis, detecting issues during CI/CD runs and cutting post-release defects by 40%.

Monitoring & Reliability

- Maintained **ERP systems** at 99.9% uptime via autoscaling and **GitOps-based deployments**, monitored with **Prometheus**, **Grafana**, and **CloudWatch**.
- Bolstered disaster recovery, reducing failover time from 2+ hours to 30 minutes, saving 40+ hours per release cycle.

Collaboration & Agile

- Collaborated in **Agile/Scrum** with **Jira** & **Confluence**, boosting sprint planning efficiency by 40% and reducing coordination delays by 1 day.

Key Projects:

ERP Deployment Optimization (Client: Goa Shipyard)

- Transitioned ERP deployments from manual to a streamlined **CI/CD** process using **Gitlab**, **Git**, **ArgoCD**, and **Kubernetes**, reducing deployment time by 75% and cutting manual effort by 60%.
- Enhanced deployment resilience by integrating secure rollback automation and real-time monitoring, reducing manual errors by 80% and ensuring 30% quicker recovery.

GitOps-based EKS Deployment:

- Provisioned and configured **3 EKS clusters** using **eksctl** with GitHub-integrated **ArgoCD** and **Helm**, enabling reliable production deployments with **80% fewer manual errors**.
- Mitigated deployment risks and improve release efficiency by automating rollback features, reducing manual error rates by 80%.
