EDUCATION

Jodhpur Institute Of Engineering & Technology <i>B.Tech in Computer Science and Engineering (CGPA - 8.85)</i>	Jodhpur Sep 2021 - May 2025
G.S. Jangid Memorial School <i>12th (69.2%)</i>	Jodhpur March 2019 - Feb 2020
St. Paul's Sr. Sec. School <i>10th (78%)</i>	Jodhpur March 2017 - Feb 2018

EXPERIENCE

Monosage <i>Software Engineering Intern</i>	Hyderabad(Remote) May 2024 - Aug 2024
- Implemented 2FA and AWS Cognito to reduce unauthorized access and enhance user protection - Developed a scalable file storage system using AWS S3, Postgres, and Node.js to improve data access speed - Created a data processing system with AWS Lambda, API Gateway, and MongoDB, reducing processing time and handling up to 500 requests per second.	
MedTourEasy <i>Data Engineer Trainee</i>	Noida(Remote) Jun 2023 - Jul 2023
- Automated data extraction via APIs for 3 external sources, streamlining data collection - Leveraged innovative data representation techniques like word embedding and t-SNE to extract deeper insights from 2000+ customer reviews - Acquired in-depth knowledge of data platform architecture and implemented ETL pipeline	
MedTourEasy <i>Data Analyst Trainee</i>	Noida(Remote) May 2023 - Jun 2023
- Analyzed 5+ datasets using spreadsheets, Python, and SQL leading to improvement in data accuracy - Independently learned and implemented BigQuery for SQL, driving data analysis, and enhancing reporting efficiency - Developed a data visualization project using R and Power BI that increased user engagement	

PROJECTS

SAR Image Colorization <i>Pytorch, Pillow, GAN</i>	Sep 2024 - Nov 2024
- Developed a Sentinel Dataset class featuring flexible data splitting (random/predefined) and streamlined image pairing, enhancing dataset organization for Pix2Pix GAN training - Implemented modular UNet components with pre-trained weights and optimized layers, reducing parameters and enhancing computational efficiency. - Implemented a Pix2Pix architecture using adversarial and L1 loss, attaining an SSIM of 0.85	
Superstore Analysis Dashboard <i>Pandas, Plotly, Streamlit</i>	May 2024 - May 2024
- Built a Streamlit dashboard to analyze 9,995 rows and 21 columns of Superstore data with multi-level filtering - Utilized Plotly for dynamic visualizations like bar charts, pie charts, and tree maps for in-depth insights - Improved data accessibility and decision-making efficiency, enabling interactive analysis and export	

TECHNICAL SKILLS

Languages: Python, C/C++, SQL (MySQL, Postgres), Javascript, TypeScript, R
Frameworks: React.js, Node.js, Express.js, Django, Next.js
Developer Tools: Git/GitHub, Jupyter Notebook, VS Code, AWS, SAS, BigQuery, Power BI
Libraries: Pandas, NumPy, Matplotlib, Seaborn, Tensorflow & Keras, Pytorch, Pillow, cv2
