

HIMANSHI GAUR GOSWAMI

Ajmer, Rajasthan

+91-8529610050 — himanshigaur15@gmail.com — LinkedIn — GitHub — LeetCode

PROFESSIONAL SUMMARY

MCA student with practical experience in Python, SQL, and machine learning workflows. Built data-driven applications, performed data preprocessing, and deployed ML models for real use cases. Experienced in EDA, feature engineering, model development, and backend integration. Collaborates effectively on technical projects and actively works with new tools, frameworks, and workflows to improve solution quality. Interested in contributing to data science, analytics, and AI/ML projects with a focus on measurable results.

EDUCATION

Poornima University , Rajasthan, India	Aug 2024 – Jun 2026
Master of Computer Applications (MCA), Artificial Intelligence and Data Science	CGPA: 8.2/10
Sophia Girls College , Rajasthan, India	Jul 2021 – May 2024
Bachelor of Science (B.Sc.), Mathematics	CGPA: 7.78/10
D.A.V. Centenary Public School , Ajmer	Apr 2019 – Mar 2021
Senior Secondary (Class XII), CBSE	Percentage: 74.2%

PROJECTS

Real Estate Price Prediction System	GitHub
- Built a linear regression machine learning model with 85% accuracy. - Processed 1,300+ structured data records, performed data cleaning, EDA, and preprocessing using Pandas and NumPy. - Created multiple REST API endpoints in Flask for prediction and data retrieval. - Designed a web interface with 2–3 sections for showing price trends and feature insights.	
NLP Text Analysis Web Application	GitHub
- Built a Streamlit application performing 4 NLP tasks: tokenization, NER, sentiment analysis, and summarization. - Used spaCy for text preprocessing, lemmatization, entity extraction, and Sumy for summarization. - Added an interface with 3 panels for displaying entities, polarity scores, and summaries. - Wrote a structured Python pipeline with multiple processing steps to keep all NLP components organized.	
Website-Based Chatbot using Embeddings	GitHub
- Built a website-based chatbot that crawls web pages, cleans HTML, and processes 8K–12K characters per page for question answering. - Implemented text embeddings and vector search using LanceDB, storing 50–200 chunks per website for fast and accurate retrieval. - Developed a RAG pipeline using Google Gemini, improving answer relevance and reducing incorrect responses. - Created FastAPI backend APIs and Streamlit UI, enabling real-time chat with session memory using SQLite.	

TECHNICAL SKILLS

- Programming Languages:** Python, SQL
- Libraries & Frameworks:** Pandas, NumPy, Scikit-learn, Flask, Matplotlib, spaCy, Sumy, Streamlit, AGNO, FAISS
- Tools & Technologies:** MS Excel, Power BI, Jupyter Notebook, MySQL, Postman, Git, GitHub
- Data Science Skills:** Data Preprocessing, Feature Engineering, Exploratory Data Analysis (EDA), Data Visualization, Model Evaluation, Machine Learning Algorithms, NLP, Semantic Search, Retrieval-Augmented Generation (RAG), Generative AI
- Core Concepts:** OOP, DBMS, REST APIs, Operating Systems, Networking, Data Structures and Algorithms (DSA)

ACHIEVEMENTS

- Solved 200+ algorithmic problems on LeetCode and GeeksforGeeks.
- Earned certifications in IBM Python 101 and Postman API Fundamentals.
