### Project:-Canteen Automation System

Canteen Automation Application to maintain data about customer ordered food was veg or non-veg, their payment and delivery details. The main objective of project is to automate existing manual system so that the process of canteen can manage all things easily and stored for longer time. Created record type , page layout as per client requirement. Involve in setting profile, role and permission sets. provide custom sharing setting through sharing rules. Used automation tools for sending email alert. Involved in Setting up Users, roles, profiles and Security settings. Also use trigger for the validation rule and field update. In two object trigger are used for the create a record for the order detail object. Use trigger for the roll up summary in lookup relation object as sum. Designed and developed various functional needs in the application. Create report and Dashboard. Used Trigger for backup data and lightning aura component.

#### Roles and Responsibilities:- Administration / Development

- ◆ Developed custom objects (Agent, Client etc.), custom fields, record type, relationship, automation tools.
- ◆ Used automation tools for sending email alert for payment confirmation, registration and verification. · Involved in setting up Users, Profiles and Security settings.
- ◆ Designed and developed various functional needs like field updates and approval process in the application.
- ◆ Used Batch Apex and Trigger to automate the backend actions.
- ◆ Created Reports and Dashboards number of verifications done.

### Project:- Covid Data Tracker (Integration Project)

In this project, the statistics of the covid 19 was fetched from api.rootnet.in and displayed on Web component.

#### Roles and Responsibilities:

- ◆ In my Integration project, First I have entered the URL of where the data was to be fetched in Remote Site Setting.

- ◆ Then I created an Apex class to convert the data that was available into the JSON format which is our return type.
- ◆ After that I have created instance of Http and also created instance of Http request.
- ◆ After creating instance, I set here Endpoint URL and set method as well i.e., 'Get' method.
- ◆ Then I have created the instance of response by using instance of Http and send request.
- ◆ By using the instance of response, I got the body.
- ◆ And after getting that body, I deserialize that data and after deserialization saved that data in variable and return edit.
- ◆ After that I had shown this data in LWC component i.e. Covid Tracker.

## **Project :- Hospital Administration**

Hospital Administration application is like Hospital Management to maintain the data about doctors, patients and visits of patients to doctors (For simplicity sake consider only OPD visits, I.e. admitting to hospital for longer duration, operation etc.can be considered out of scope).

### **Roles and Responsibilities:- Administration / Development**

- ◆ Work on email alert, validation, relationship, workflow, approval process, sharing and security, reports and dashboard
- ◆ Put lookup relationship between appointment to patient and doctor so that it is easy to manage the appointment for a particular doctor.
- ◆ Apply sharing and security for user which is only create and view the records.
- ◆ Write the trigger to calculate the count of appointment because there was lookup relationship between doctor and Appointment.
- ◆ Also write the trigger to take backup for Doctor and Patient object to store record in DB.
- ◆ Write test classes to check actual and expected output is similar.
- ◆ Implemented lightning aura component flow

### **Personal Details:-**

**Date of Birth:** 16<sup>th</sup> April 1996

**Gender:** Female

**Languages:** English, Hindi, Marathi

**Address:-** 31' Sharda Nagar, Hudkeshwar Road, Near Domino's Nagpur-440034

**City:-** Nagpur

**Country:-** India

**Marital Status:-** Married

### **Declaration :-**

I hereby, declare that above mentioned information given by me is true and correct to the best of my knowledge and belief.
