**Trailhead:** <https://www.salesforce.com/trailblazer/ktrivedi29>

## Experience Summary:

- Brings 2 year of IT experience on salesforce.com, which includes Salesforce development experience.
- Strong Knowledge of SFDC standard Data structures
- Experience on various technologies like Node-JS, React-JS, JavaScript, Backend Implementation as well Front End
- Familiar with designing Custom Objects, Force.com platform and Force.com Sites.
- Experience with APEX, Visual force and Lightning web component.

## Technical Expertise:

| Elements              | Particulars                           |
|-----------------------|---------------------------------------|
| Primary Skills        | Salesforce Development                |
| Operating Systems     | Windows 10, 8, 7                      |
| Languages             | Apex, Visualforce, Java, Node Js, Lwc |
| Development Tools     | Force.com, VS Code                    |
| CRM tools             | Salesforce                            |
| Scripts               | JS                                    |
| Database Connectivity | JDBC                                  |
| Designing Skills      | CSS, Bootstrap, Lightning             |
| Databases             | MYSQL, PostgreSQL, Mongo-Db           |

## Certifications

| S. No | Certifications       |
|-------|----------------------|
| 1     | Salesforce Associate |

## Experience Details (Starting from the Current Job):

| S. No | Name Of The Organization | Designation          | Joining Date | Relieving Date |
|-------|--------------------------|----------------------|--------------|----------------|
| 1.    | iBirds Software Services | Salesforce Developer | 27-July-2022 | -              |

### Project Experience: (Starting from the Current Project)

#### Batwara Lead Management

|                       |                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Project Name          | <b><u>Batwara Lead Management</u></b>                                                                                                                                                                                                                                                                                                                                                                 |
| Client                | Keshav Batwara                                                                                                                                                                                                                                                                                                                                                                                        |
| Project Description   | In this project, we developed a Lead Management CRM system where we seamlessly integrated Gmail with Node.js. Leveraging the Gmail API, we implemented a functionality that automatically assigns incoming emails to specific users based on the subject. This automation enables the system to create new leads and tasks, streamlining the lead management process and improving overall efficiency |
| Environment           | Google Cloud Console, Node-JS, Postman, Mongo-DB                                                                                                                                                                                                                                                                                                                                                      |
| Role / Responsibility | In this custom integration with Salesforce APIs, our solution enables seamless user authentication and efficient management of user permissions, providing a shared and collaborative environment. This project having 12 API, which took care data synchronization mechanisms to ensure real-time data updates between the custom application and Salesforce platform                                |
| Team Size             | 5                                                                                                                                                                                                                                                                                                                                                                                                     |

#### PPP(Problem Property Pals API Integration)

|                       |                                                                                                                                                                                        |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Project Name          | <b><u>PPP(Problem Property Pals API Integration)</u></b>                                                                                                                               |
| Client                | IT Edge                                                                                                                                                                                |
| Project Description   | Getting proper address with the help of address user entered using geocoding API. Then Taking response from PPP API to Update record details                                           |
| Environment           | Salesforce site                                                                                                                                                                        |
| Role / Responsibility | <ul style="list-style-type: none"> <li>● LWC</li> <li>● Apex</li> <li>● Custom MetaData, Custom Labels</li> <li>● Triggers</li> <li>● API Integration(PPP API , GeoCoading)</li> </ul> |
| Team Size             | 3                                                                                                                                                                                      |

### **Ibs-College:**

|                       |                                                                                                                                                                                                                                                                                      |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Project Name</b>   | <b><u>College CRM</u></b>                                                                                                                                                                                                                                                            |
| Client                | IT Edge                                                                                                                                                                                                                                                                              |
| Project Description   | Build a cost-saving solution using Node.js and React.js that grants multiple users access to the full suite of Salesforce functionalities without the need for purchasing multiple licenses. By developing a custom integration with Salesforce APIs.                                |
| Environment           | Node-JS, React-JS, Salesforce, PostgreSQL                                                                                                                                                                                                                                            |
| Role / Responsibility | The core responsibility in which I have is to gather the entire requirement from the client, create the roadmap and divide the work in the team. In this custom integration with Salesforce APIs, our solution enables seamless user authentication and efficient management of user |
| Team Size             | 5                                                                                                                                                                                                                                                                                    |

### **Academic Qualification (Highest Degree on Top):**

| S. No. | Degree           | Name of Institute          | Name of Board/University |
|--------|------------------|----------------------------|--------------------------|
| 1.     | MCA              | Jaipur National University | JNU                      |
| 2.     | BCA              | Star Infotech College      | MDSU                     |
| 3.     | 12 <sup>th</sup> | Queen Mary's Girl's School | CBSE                     |
| 4.     | 10 <sup>th</sup> | LBS Academy                | CBSE                     |

### **Hobby and Interest:**

- Traveling
- Reading Books

### **Personal Words:**

Puts best of the abilities to provide benefits to the organization and tries to be with a project till its deployment. Along with it, I learn new things for self-improvement.

**Kriti Trivedi**
