## Summary

Final-year B.Tech Information Technology student with a robust foundation in **Machine Learning, Full-Stack Web Development, and Cloud Computing**. Demonstrated expertise in building scalable applications, automating complex data pipelines, and deploying predictive models to solve real-world business challenges. Proficient in Python, JavaScript, and Modern Cloud Architectures (Azure). Passionate about leveraging algorithmic problem-solving skills to drive Technical Innovation.

## Education

|                                                                                                                                                                                                              |                                                                                                         |

## Technical Skills

**Languages:** JavaScript (ES6+), Python, Java, C++, SQL, Bash Scripting  
**Frontend:** React.js, Redux, HTML5, CSS3, Bootstrap, Tailwind CSS, Material UI  
**Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication, WebSockets  
**Databases:** MongoDB, PostgreSQL, MySQL, Firebase Realtime DB, Redis  
**DevOps/Cloud:** AWS (EC2, S3), Microsoft Azure, Docker, Kubernetes, CI/CD Pipelines  
**Core Concepts:** Data Structures & Algorithms, System Design, OOPs, Linux Administration

| <b>Urban Commerce Clothing Website</b><br><i>Full-Stack E-commerce Application</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Personal Project</b><br><i>React, Node.js, Firebase</i> |
| – <b>Scalable Microservices Architecture:</b> Built a fully functional e-commerce platform using React.js for the frontend and Node.js for backend logic, ensuring modularity and code reusability.<br><b>Secure Authentication System:</b> Integrated <b>Firebase Authentication</b> to manage user lifecycles, including secure sign-ups, logins, and persistent sessions, ensuring strict data privacy.<br><b>High-Performance API Development:</b> Designed <b>RESTful APIs</b> using Express.js to handle complex server-side operations such as product inventory management, real-time shopping cart updates, and secure order processing.<br><b>Responsive UI/UX Design:</b> Crafted a mobile-responsive user interface with modern CSS frameworks, optimizing load times and ensuring a seamless shopping experience across mobile, tablet, and desktop devices.<br><b>Live Demo:</b> urban-commerce-shopi.vercel.app   <b>GitHub:</b> github.com/mayanktak15/Urban.Commerce |                                                            |

## Certifications

- **Backend Development Course** – Physics Wallah (Node.js & Database training)
- **Linux Unhatched** – Cisco Networking Academy (Command Line proficiency)
- **Machine Learning A-Z: AI, Python & R** – Udemy (Advanced ML Algorithms)
- **The Complete 2023 Web Development Bootcamp** – Udemy (Full Stack mastery)
- **Machine Learning for Data Science Projects** – IBM SkillsBuild
