Training & Development	Technical ability to Train and Troubleshoot

Professional Experience (In Reverse Chronological Sequence)

Client Name	HCSC (Health Care Service Corporation)
Project Name	HCSC (Health Care Service Corporation)
Project Duration (From & To in Month/Year Format)	Mar 2021 to Apr 2022
Role/Title	Salesforce Application Developer (Consultant)
Work Location	Bangalore (India)
Project Description	➤ HCSC is a 4th Leading Insurance company in US which deals with Providing the Insurance to the User and Provide various services to the User once they hold the insurance policy. ➤ We worked on agile methodology with various teams work in parallel such as Claims, Benefits, Features etc. ➤ I was part of Claims team during my tenure with HCSC. ➤ On accessing the pages that we have built, CSR users can access all the information from various system on a single page. ➤ We communicated with various systems such as MDG, SAP to gather out all information to CSR on very minor clicks.
Responsibilities	➤ Built several pages and flow pages by which CSR users can take handle the clients smoothly by capturing various details at various systems and even to let the end users to know about their claim status etc. ➤ Complex integration process through Mulesoft as middle ware. ➤ We are total of team of 7 members and delivered at a total of more than 10 sprints during my tenure.
Operating Systems	Windows (Application is not OS Specific as it can be accessed via any browser)
Hardware	NA

Software / Special Tools	➤ User Interface: Lightning Components, LWC, Visualforce Pages. ➤ End to End Integration: Apex, Continuous Integrations, Rest, Apex Triggers, Batch and Schedule Apex, Future Jobs. ➤ End point Testing: Postman, SOAP UI. ➤ Deployments: SFDX, Click Deploy. ➤ Repository Management: Stash, Source Tree. ➤ Middle Ware: Mulesoft.. ➤ Methodology: Agile. ➤ Feature Cloud: Sales Cloud.
Languages	Aura Frame Work, LWC, JavaScript, JQuery, Apex Programming Language, Rest ,SOAP and Continuous Integrations

Client Name	City National Bank (CNB)
Project Name	PPP (Paycheck Protection Program)
Project Duration (From & To in Month/Year Format)	Jul 2022 to Feb 2023
Role/Title	Salesforce Application Developer (Consultant)
Work Location	Bangalore, India
Project Description	The Paycheck Protection Program (PPP) provides loans to help businesses keep their workforce employed during the Coronavirus (COVID-19) crisis. In order to reach the smallest businesses, CNB will offer PPP loans to businesses. Borrowers can apply for forgiveness of First or Second Draw Paycheck Protection Program (PPP) Loans with SBA Form 3508S if the loan amount you received was \$150,000 or less for an individual First or Second Draw PPP Loan (previously \$50,000). ➤ During the Round 1 there were 1200+ employees from CNB work more than 14 hours to help the borrowers to apply for PPP loans manually. ➤ We have built a very effective and fast responding application such that for Round 2 Applications currently there is less than 200 employees are working through our application. As per the feedback we got from the client the average hours of working of individual is almost only 9 hours and productivity of individual is increased by 145%.
Responsibilities	➤ We built a portal application by which borrower can apply and submit the application to SBA for PPP Loan in matter of minutes. ➤ We provided the ability to generate the forms in case of any documentation needed so it would be handy for the borrower as all the documents he can found at one site which are required to apply for loan.

	➤ We built a portal application at which borrower can check the status of the application and what actions are pending from his/her end for smooth processing. ➤ Portal is fully built up over Salesforce CRM which takes care most of the security issues so borrower never distract of his/her PII information. ➤ The project includes more than 10 integrations with U.S. Small Business Administration loans for both PPP and forgiveness application issuing to the borrower. All these integrations are through certification based authentication and OAuth 2.0 and fully build on Rest Web service flow. ➤ We built the user friendly application by using most advanced aura framework for UI. ➤ For auto generation of required document from the details that borrower provided from the application we make use of Conga which auto generates loan docs by a matter of click. ➤ For e-Sign we make use of Open Sign from Managed Package which auto sends to the reporting persons as soon as the doc generates from the portal and signed document auto upload to the system as soon as corresponding authenticated user signs off. ➤ We built an application in such a way that borrower get notify as soon as his/her application status changes or in case of any documentation needed. For this we take advantage of Salesforce workflow rules. ➤ For gathering and consolidating the entered data into generating forms, for submission of application to SBA and to capture response back we make use of Apex Programming. ➤ Whatever the docs which are auto generates, signed docs and manual upload, all these docs are maintained at FileNet Server which could happen only on borrower expression of interest. ➤ For all the end to end application we make use of following skills such as “Lightning Components, Apex, Visualforce Pages, Workflows, Process builders, Continuous Integrations with Rest, Postman for end point validation, OAuth2.0 for secure communication. ➤ For various data visibility based on kind of user we make use of Salesforce sharing rules and Sharing sets. ➤ To provide and limit the access based on kind of end user and on various categories we take advantage of Sharing Settings, Sharing rules, Manual Sharing and Apex Sharing.
Operating Systems	Windows (Application is not OS Specific as it can be accessed via any browser)
Hardware	NA
Software / Special Tools	➤ User Interface: Lightning Components, LWC, Visualforce Pages.

	➤ End to End Integration: Apex, Continuous Integrations, Rest, Apex Triggers, Batch and Schedule Apex, Future Jobs. ➤ End point Testing: Postman, SOAP UI. ➤ Deployments: SFDX, Click Deploy ➤ Repository Management: Azure. ➤ Document Generation: Conga. ➤ e-Signature: Open Sign Managed Package. ➤ Methodology: Agile. ➤ Middle Ware: Informatica. ➤ Feature Cloud: Sales Cloud, Community Cloud.
Languages	Aura Frame Work, LWC, JavaScript, JQuery, Apex Programming Language, Rest Integration.

Client Name	The Warranty Group
Project Name	The Warranty Group
Project Duration (From & To in Month/Year Format)	May 2023
Role/Title	Salesforce Admin/Dev
Work Location	Bangalore (India)
