❖ PROFESSIONAL SUMMARY

Experienced and versatile software developer with 2 years and 6 months of expertise in Java, Python, and shell scripting, complemented by proficiency in Salesforce technologies including Apex, Lightning Web Components (LWC), SOQL, and triggers. Skilled in developing robust applications across diverse platforms, troubleshooting complex issues, and collaborating with cross-functional teams. Strong communicator, problem solver, and dedicated learner, ready to contribute to your organisation's success.

❖ WORK HISTORY

Amdocs – Software Engineering Associate
Aug-2021 to July 2023 (Pune, India)

Amdocs – Software Developer
July-2023 to Current (Pune, India)

❖ ROLE AND RESPONSIBILITIES

1. Pull request review and maintaining high standard code quality.
2. Development.
3. Leading the project.
4. Estimation of the project.
5. Release management.

❖ EDUCATION

Asansol Engineering College
2017-2021 (Asansol, India)
B.Tech: Computer science and engineering

❖ SKILLS

Lightening Web Components
Apex
SOQL
Trigger
Aura
Java Script
SQL
Java
Unix
Shell scripting
Python
HTML
Kibana
Kafka
Git lab
CI CD implementation using Jenkins

❖ CERTIFICATIONS

1. Salesforce certified platform developer 1
2. Amdocs SQL certification
3. Amdocs Unix certification
4. Amdocs Java certification

❖ ACCOMPLISHMENTS

Employee of the quarter (May 2022)
Employee of the quarter(Dec 2022)
Rising star of the quarter(Aug 2023)
Employee of the quarter(April 2024)

❖ PROJECTS

1. **Optus**

This project provide solution for creating and maintaining agreement between different parties. One of the module of this project is MEC(Master Enterprise Catalog). This application is basically uses core java. The purpose of this application is to configure offers ,components , attributes, relations , prices , mapping etc .. We generally creates methods which we use in configuration of the offer creation by developing certain rules .

My Role/Work: worked as developer in this project and implemented offer mapping for different components. It usually helps the ordering flow run with the help of APIs

2. **SRE(Site Reliability Engineer) - Automation**

Site reliability engineering (SRE) is the practice of using software tools to automate IT infrastructure tasks such as system management and application monitoring. This framework uses Python for development, Kubernetes as infrastructure , Kafka as event streaming platform , Jenkins for build , and Git Lab as a repository etc.

With the help of SRE , we can automate repetitive tasks and avoid manual handling .

My Role/Work: I have developed multiple automations using the SRE framework as followed :

1. **Auto ticket closure** : This is a self-healing automation, it daily checks that if there is any repetitive ticket on the basis of description and closes that after taking the backup and storing that in database for future reference.
2. **Deletion of junk directory** : This is also a self-healing automation, it daily checks for the junk related file which is 15 days old and deletes .
