- Implemented Sales Cloud and Experience Cloud for building Polarin Partner Portal.
- Created Partner Account and made the Contact as a Partner User by enabling Contact as Partner User.
- Created Login Page with the help of Lightning Designing System and added CSS to make portal look and feel better.
- Created various Pages like Home, Sales-Leads, Sales-Deals, Profile, Marketing Budget Pages.

Project: Automation of Business Processes for Sales Users

Role: Senior Salesforce Developer

Feb-Dec 2023

Cloud: Sales/Service Cloud

- Created a Business App named Automation of Business Process for Sales Users. It is a Salesforce App and environment meant to facilitate the creation and approval of orders generated by a firm's clients.
- The firm's order-handling team comprises employees in sales, business, and support roles. This system is meant to handle how an employee interacts with and handles order and client data while overriding the standard sales cloud utility with customizable lightning web components.
- Lightning Web Components are used to create an app home page and override actions wrapped in an aura component. Order approval was automated. Triggers were used to apply business logic.
- Batch apex jobs which could remove empty orders on a timely basis and Used a Limited salesforce license reduced the number of users.
- This app gives different sets of users various permissions and dynamic order management

functionality is used.

- Used Visualforce Component to display a personalized message to the order viewer.
- Designed, Developed Apex Classes, and Controller Classes for various functional needs of the application.
- Designed various Lightning Components in VS Code for Capturing Enquiries and Implemented Business Logic.
- Wrote SOQL and SOSL statements within custom controllers.
- Developed business logic per business requirements using Apex Classes, Triggers, Test methods, and writing SOQL queries.
