SKILLS

- **Languages :** Java, C language, Python, Javascript, PHP, HTML, CSS, SQL
- **Version Control System:** GIT
- **Source Code Management:** GitHub and GitLab
- **Computer Science Fundamentals:** OOPs, Operating System, Computers Architecture, Computer Network
- **Data Structure And Algorithm**

PROJECTS

Virtual Realm — Game Store

Developed a web application enabling users to download their favorite games without time restrictions.

- Created dynamic pages using Web APIs.
- Implemented user authentication with email verification for a secure signup process.
- Integrated PhonePe payment gateway for seamless and secure payment transactions.
- Designed and implemented an admin panel allowing for sales analysis and efficient management of products.

<https://github.com/Piyush-0007/Virtual-Realm.git>

Sorting Visualizer

Developed a sorting visualizer to demonstrate various sorting algorithms in action.

<https://github.com/Piyush-0007/Sorting-Visualiser.git>

The Bread Box

Designed a visually appealing interface that effectively showcased bread varieties and specials.

Implemented responsive design principles to ensure the website functioned flawlessly on desktops, tablets, and smartphones.

Utilized CSS media queries and flexible layout techniques to adapt the website's layout and content based on screen size and orientation.
