EXPERIENCE

• Salesforce Developer - Persistent Systems Ltd.

Jan 2022

- Working in Development Team to design and Develop robust solutions according to client specifications for proper functionality, scalability, stability, and performance.
- Supported existing integrated platforms and new integrations using third-party integration tools to enhance business processes and operations.
- Find the root cause of any issues and suggest acceptable solutions. Making sure that the job is properly documented.
- Doing Regression testing to check the performance and modification of the org.
- Using Azure DevOps tools to deploy solutions in higher orgs and production.

• Intern - Persistent Systems Ltd.

Salesforce Developer Training

- Worked on Admin and Developer Part in which I worked with Apex Classes, Test Classes, Flows, Omni Channel, Custom Objects, Validation Rules, Custom Metadata, Profiles, and Users.
- Tested functionality, carried out modifications to conduct quality checks, and performed debugging.

PROJECTS

Service Cloud, Marketing Cloud :

For the Client, I developed and managed custom objects and fields, email alerts, approval processes, and permission sets. Additionally, I oversaw the marketing surveys and production of consent forms, emails, and promotional videos. I ensured that all details were according to specific regions and teams. In response to the client's request, I made modifications to the Apex classes to enhance current features.

Sales Cloud, Health Cloud :

Created an agent interface for selling client's products to patients with the use of Flows, Custom LWC Components, Apex classes, and LWC pages. We implemented IVR and Omnichannel systems to efficiently distribute patient calls and cases among available agents.
