LWC	SLDS	REST api
Integration		

TRAINING / COURSES

Apex Specialist

Trailhead Superbadge

Flow Elements and Resources Specialist Superbadge

Trailhead Superbadge

Data Integration Specialist Superbadge

Trailhead Superbadge

PROJECTS

Contact Tracing App

This app will be helpful for any organization during a global pandemic to trace their employees' health status so that they can take precautionary steps to prevent their employees from getting affected.

- Languages used: Apex, SOQL, Triggers.
- I implemented this by giving colors(Red, Yellow, Green, Orange) to the person based on the person's Health condition and the Locations the person visited in last 10 days.
- If a person visited a Location which is in a Red and the visit date of a person was last 10 days than all the people visited to that Location will be marked as Yellow except the people having Health Statuses as Red and Orange.
- If a person's health status is red, then all the people that person met will be marked as orange and yellow based on the conditions.
- Based on all the conditions, we will have a count of employees who are affected or have the potential of getting affected by the disease.

Rent A Car

This project allow us to see the available rental cars based on their type and car details will shown along with the current location of the car.

- Languages used: LWC.
- In this application user can choose any type of car like sports, luxury, compact, and based on the selection cars will be shown.
- User can also see the past experiences of users who booked that car and user can also add his own experience of that car.

MOOC

Training/Courses

Self learning from Udemy, Trailhead and YouTube.

Exploring and Learning Salesforce technologies.

Apex, Triggers, LWC, Flows, Validation Rule, Formula Fields etc.
