Kolkata

SKILLS

Java,Python
MySQL
HTML5/CSS
Azure, Postman, Salesforce,
Jira,GCP

WORK EXPERIENCE

Software Engineer

- Worked at **Apmosys Technologies** as a Software Developer from January 2024 developing and maintaining software applications while collaborating with cross-functional teams to deliver high-quality solutions. Engaged in the entire software development and testing lifecycle, from design to deployment, ensuring robust and reliable software performance.
- Worked at **Fusion** as a Customer Care Executive for 2 years, providing exceptional support and resolving customer inquiries efficiently.

Internship

- Completed an internship focused on Java, where I gained hands-on experience in developing Java applications. Enhanced my programming skills and understanding of software development practices through practical projects and collaborative work.

PROJECTS

Project #1: LOS Salesforce Application

- I developed a LOS banking application in Salesforce, focusing on loan management and transaction processing, with customized workflows and rigorous testing for secure financial operations. Integration with third-party APIs enhanced functionalities like payment processing and credit scoring.

Project #2: Banking Application Testing

- Designed and implemented an automated testing framework using Selenium WebDriver and Java, specializing in web application testing. Developed custom scripts for automated test case execution, regression testing, and UI validation, ensuring thorough software quality assurance. Integrated the framework with CI/CD pipelines to automate testing processes across development stages, enhancing efficiency and reliability in software deployments.
