Projects: -

Indian Army. New Delhi— Internship (August 2021 - September 2021)

I have built a full stack developer website using spring boot web crud app and java code implementation for them where the army can manage and trace the location of their cadets.

I Have made a project in which the past details and the upcoming details of army brats gets traced and help them to locate the soldier The technologies used in the projects were JAVA, JavaScript , SQL, Spring, MVC Structure

Project Name — Online Grocery Shop

It is an online grocery shopping in which a customer can order an food item As well as grocery items as per their requirement .The App has been built for Both the customer as well as admin role ,in the web portal both the details of customer and admin has to be filled and after entering the corrected details only, both user and admin can enter into the site else they will get an message of wrong credentials. After entering the corrected details, they will enter a grocery shop where they can place their order and check out the items. All the details of Users will be saved in the backend and all the item details will also get saved in the backend, Admin also has the role of performing CRUD Operations on the Web portal. The Technologies used are angular, JavaScript, node js,typescript and Oracle as backend

Project Name — FD Project

In this requirement i have created a functionality of every possibility of FD

1. A screen to open an FD accout with Applicant/co-applicant and if nominee added it with spouse on a salesforce app and created a maker/checker journey to verify all the necessary documents uploaded on salesforce after verify the details Calling an finnacle core ai and storing the details of the applicant in the core-system by API Integration
2. A Screen for FD Bank details change in which taking a consent/documents of applicant/co-applicant sending them sms on their mobile no and fetching the FD details through Core API directly and sending the sms at same time to 4 different no ,Validating the Bak through IMPS POD journey and if account is valid then proceeding with the maker/checker journey and after approval updating the details in the GCD of the Core system.
3. Similar maker/Checker Journey Done for FD Prematurity /BRD Deceased Fd Process.

Project Name — Mandate

In this requirement doing an mandate of an customer visiting to branch for the insurance deposit/EMI .in this mandate in getting collected in two ways by physical mandate in which agent take signed document and upload on the SFDC CRM platform and other one digital in which aadhaar bio-metric/IMPS/digilocker journey for the document retrieval need to be doe in which the bank account and the valid proof is fetched from the digi locker and will store the response and converted into the document and stored at SFDC and the Move to DMS against cust id which is updated in the GCD for the future purpose.

Project Name — Demographic Changes for Customer Profile

In this requirement i have build the 2journey

In Branch Customer visit on the basis of customer ID all the details of the customer will be auto-populated on the LWC Screen and then the selection need to be done by the agent for the updation (Modify PAN/Address/Mobile/Name/Gender/Age) after selection we process them to different tab on the same page itself

1. Modify PAN - we enter the details of PAN hit the NSDL API of income tax retrieve the data and after getting success will proceed further for the change process.

2. Modify Address and other we take the application form and the OVD/DOVD documents of the Customer and after verification of all the process we update the details in the GCD through REST API.

In digital journey the customer login their request through bajaj app and after completing the digi-locker journey the documents is get attached in the SR request in which at backed he goes under fuzzy match detection api and after that SR gets created in the SFDC CRM after creation their logic has been built in this after validating all the success conditions the details of the customer gets updated in the GCD and the documents gets move in the DMS in the real-time scenario which take around 2-3 minutes to gets customer details updated in the GCD and DMS .
