- Lightning Web Components (HTML, CSS, JavaScript)

PROJECTS

Inventory Management System

The Inventory Management System in Salesforce manages product availability and tracking within an organization efficiently. Custom objects like Registration, Inventory, Products, and Order Status capture key product and user details. Object relationships link products, users, and inventory, ensuring smooth data flow across the system. Validation rules maintain data accuracy, enforcing proper warranty periods, contact numbers, and other critical fields. Workflows and Apex Triggers automate tasks and apply custom business logic for seamless inventory management processes.
