PROJECT DETAILS

Project 1:

Project Title : Banking solutions
Team size : 7
Role : Salesforce Admin/Developer

Description:

Banking Application to maintain Bank user's records. Based on customers interest we get the data in the form of lead and process lead journey from lead creation to Account creation. Application is used to get the users data from various vendors and process user's data according to various products available in the business model.

My Responsibilities:

- Worked on lightning flows to create end to end journey of the application
- Worked on apex triggers, test classes, Batch classes, Schedule Apex.
- Designed lightning components (LWC/Aura) for various custom screens in the flow.
- Worked on user management and Profiles setup.
- Creation of various reports and dashboards.
- Data migration to salesforce.com using Data loader and Data import Wizard

Project 2:

Project Title : Financial Corporation
Team size : 9
Role : Salesforce Admin/Developer

Description:

Application is used to provide loans to customers based on the house property documents or business property documents. We use various processes to validate the documents and property. Once these are validated then the system will send email to customers, how much loan we can provide based on the above details. if customer accepts then the deal will close.

My Responsibilities:

- Custom development using Apex and Lightning Aura Framework.
- Designed Web to Case for Case Management.
- Responsible for data cleanup and/or Data migration to from salesforce.com
- Responsible for creating customizing custom fields, Page layouts, Tabs, Custom settings, Field level security, Profile settings, Record types,
- Apex Triggers, Apex Classes, work flow rules, Validation rules and Formula fields for various standard and custom objects.

CERTIFICATIONS

- Salesforce Certified Platform Developer 1.
