Project Description

Project 1	Industry: NGO/Fund Provider In this project serves Churches, Schools, Nonprofits, Family Offices, and Values-Based Businesses through hiring, compensation, succession, and culture solutions. Weather API Integration: • Did integration of weatherapi.com to fetch weather report for a location. • Designed a dynamic UI in LWC component to display weather forecast for current date and for next 7, 10, 14 days and beyond. My contribution to this project is as a support developer Created UI for various tabs using Visual force. Created apex classes. Created test classes. Created JavaScript functions. Created JQuery function.
Project 2	Industry: Loan/Insurance The project is based on policy and insurance. Basically provide support and resolve the queries and also calculate your rating. My contribution to this project is as a developer and admin. Created Apex classes Created custom objects for conversations. Created test classes. Created LWC component Created Flows Created process builders Created Email template
Project 3	Industry: Loan/Insurance Role: Developer Orion form UI is based on forms. In this, we have to show the form detailed according to the filter's conditions, then we have to save this form in the database My contribution to this project is as a developer. Created UI for various tabs using lightning web components. Created apex classes. Created Lightning web components for calculating the Insurance Amount. Created JavaScript functions.
Project 4	Industry: HR or Management Role: Developer

	This project is used for remotely managing the employees and employees to see their activities. It helps to manage the company as well as its employees. The employee can see their leave, policy, holidays, and attendance. It includes all the basic management functions related to the company. My contribution to this project is as a developer. Created Apex Classes. Created Apex Triggers for automation. Created test classes.
Project 5	Industry: Communication and Services Role: Developer This project is based on files and integration in which the client required many connectors Integration Salesforce to Google Drive Salesforce to Zoho Salesforce to Salesforce My contribution to this project is as a support developer. Created Dynamic Ui using LWC Created custom file uploader Created custom objects for conversations. Created test classes. Created Mock classes.
Project 6	Industry: Hospital Role: Developer This project is based on hospital management system. In which we do multiple integration like with Pharmse and lab My contribution to this project is as a developer. Created Apex classes, Batch classes, and Schedulable classes. Apex Triggers. Created custom objects for conversations. Created test classes. Created Mock classes. Created LWC component Created Multiple Flow and validation rule etc Created Web services Do integration with Sufflam and wondersoft Api
