- Created Apex REST APIs and LWC.
- Managed integrations with third-party applications.
- Generated reports and dashboards, configured validation rules, formula fields, workflows, and security settings.
- Designed and implemented Salesforce Flows.
- Utilized Data Loader for data management.

Projects

Project 1: PIMIO AppExchange

Description: It is an app exchange Application where user can install its package in to their org. In this the user can create product records, multiple translation records at a time. User can export all the related product's translations which is linked to a category and channel object into different file format (Amazon, eBay, SFCC). User can upload multiple images of the product from the product's record page and these images will show on the record page in the slider manner. The dashboard shows the product information into graphical manner. The PIMIO Aspire tab is use to ask the questions, translate the description in to different language with the help of Chat-GPT integration.

Tools and Technologies used: LWC, Apex class, Trigger, REST API Integration, Flow, report and dashboard, custom metadata, custom setting, field set and package bundling.

Project 2: Timesheet Management Portal

Description: It is an employee's tracking portal of an organization. Employee can fill their daily work status, work type, total working hours and can see the Team Overview. HR team can easily track their employees. The dashboard shows employee's daily, monthly, yearly performance in chart. Employees can raise Timesheet update requests from this portal. Their Reporting Manager can approve or reject their Timesheet update requests. One tab to extract timesheet.

Tools and Technologies used: LWC, Apex, Trigger, Flows, Validation Rule, Formula Field.
