Technical Skills:

Languages/Databases	:	Apex, Java, Python (Core), SOQL
Technology & Frameworks	:	Salesforce.com, force.com, Salesforce Administration.
Web Technology	:	LWC, Visualforce, HTML, CSS, JavaScript
IDE & Tools	:	VSCode, Eclipse, Git, Postman, MuleSoft

Experience:

Accellor (previously PopcornApps)

Salesforce Developer (05/2022 – current Hyderabad, TG)

- Performed manual data archival using Salesforce tools like Data Loader. Implemented Python scripts to Automate Data Archival using Salesforce API (REST and Bulk) from Service cloud.
- Collaborated with cross-functional teams to gather requirements and implement solutions to enhance Salesforce functionalities.
- Successfully designed and implemented custom logic within Salesforce Communities (Experience site) using the **Lightning Web Components (LWC)** framework.
- Achieved a consistent **Apex test class coverage of over 90%** throughout multiple complex deployments, ensuring the stability and reliability of critical functionalities.
- Implemented various Async Apex techniques, including **Batch Apex, Schedulable Apex, Queueable Apex**, and **Future Methods**, to efficiently handle data processing tasks and enhance system performance.
- Have Knowledge on Profiles, Roles, Permission Set, Sharing and Security, Relationships etc.
- Have Knowledge on Process Automation tools like workflow, Process Builder, and flow etc.

- Proficient in **Agile methodologies**, actively participating in ceremonies like user story grooming, sprint planning, and sprint retrospective, and accurately estimating tasks through story points.
- Explored MuleSoft as part of internal POC and explored features and different connector like Salesforce , Database , Email, Gmail, Google drive Connector etc.

Projects:

Specter

Roles & Responsibilities:

- Project deals with POC on Einstein for Service cloud for Intel.
 - As part of this, we have explored, configured Einstein for Service cloud features like Einstein Article Recommendation, Einstein Reply Recommendation, Einstein Work Summaries, Einstein Case Classification, Einstein Service AI Grounding, Einstein Service Replies.
- And tested feasibility with Intel Service Cloud by considering various scenarios.

UCD (Unified Customer Data)

Roles & Responsibilities:

- This project deals with identifying duplicate accounts across different systems, analyzing whether they are potential users accounts to reduce the discrepancy of accounts in the system.
- **Led** team of 5 members and successfully accomplished comprehensive data analysis and cleansing procedures by implementing distinct methodologies to detect duplicate accounts within Service Cloud. Implemented Python scripts to purge Accounts and effectively **purged** nearly **3.2 million** duplicate Accounts and associated records from Service Cloud.
- Efficiently **analyzed** the **flow of data** (Account & Contact record lifecycle) across various systems, successfully identifying the root cause behind Account duplication within the Service Cloud and documented it.

RLS (Reverse Logistics System)

Roles & Responsibilities:

- This project deals with create Case and tracking return requests for the products.
- In this Project Total 11 Object in which 6 Standard and 5 custom object created.
- Create LWC component and Implemented **Lightning Web Components (LWC)** for Salesforce Community pages,resulting in a seamless and personalized user experience for community members.
- Proficiently developed Integration features to consume External Transportation System REST APIs to validate shipping address.
- Configured Record-level sharing through OWD.

Certifications:

- Salesforce Certified Platform Developer I (PD-1).
- Salesforce Certified Platform Developer II (PD-2).
- Lightning Web Component(LWC) Certificate Udemy.
