EDUCATION

Swami Keshvanand Institute of Technology(SKIT), Jaipur
B.Tech - Information Technolgy - CGPA (8.3)

2022 – 2026

Jaipur, Rajasthan

DAV Public School (12th)

Bokaro Steel City, India (2021)

Chandrasheel Vidyapeeth (10th)

Muzaffarpur, India (2019)

TECHNICAL SKILLS

Languages: Python, SQL, C++

Machine Learning & AI: Scikit-learn, PyTorch, Pandas, NumPy, NLTK, Streamlit, Cosine Similarity.

Data Processing & Visualization: Matplotlib, Seaborn, Data Preprocessing, Feature Engineering

Big Data & Cloud: AWS S3, Heroku

Model Deployment: Flask (basic), Streamlit, API Integration

Tools: Git, GitHub, Jupyter Notebook, VS Code

Others: Agile (Scrum), Data Structures & Algorithms

PROJECTS

Image Classification Web App [🔗](#) | Python, PyTorch, Streamlit

2024

- Developed a web application using Streamlit for image upload and real-time classification.
- Implemented a pre-trained ResNet-101 model (PyTorch) to classify images into 1000 ImageNet categories.
- Designed a clean UI for seamless image upload and top-5 prediction results with confidence scores.
- Optimized deployment with minimal dependencies (PIL, torchvision, torch) for ease of reproducibility.
- Utilized PIL for image preprocessing (resizing, normalization) before model inference.
- Ensured efficient GPU/CPU compatibility in PyTorch for smooth execution during predictions.
- Packaged the solution as a portable, interactive tool for quick experimentation and demonstrations.

Movie Recommender System [🔗](#) | Python, Pandas, Scikit-learn, NLTK, Streamlit, TMDB API

2024

- Processed the TMDB 5000 movie dataset using Pandas/NumPy, transforming and merging features (genres, cast, crew, keywords) into a unified dataset.
- Applied NLP preprocessing with NLTK and Scikit-learn vectorization to build a content-based recommendation engine using cosine similarity.
- Developed a Streamlit web app (deployed on Heroku) that delivers top-5 similar movie recommendations with posters fetched dynamically from the TMDB API.
- Implemented TF-IDF and Count Vectorizer models for text-based feature representation, ensuring accurate similarity computation.
- Optimized feature engineering pipeline for scalability, enabling efficient recommendation generation even on large datasets.
- Enhanced user experience with dynamic poster integration via TMDB API and a responsive Streamlit UI.

CERTIFICATIONS

- Deloitte Technology Virtual Internship – Forage (June 2025) [🔗](#)
- AWS Solutions Architect Virtual Internship – Forage (June 2025) [🔗](#)

EXTRACURRICULAR

- Finalist at LNMIIT Hackathon in 2023.
- Organized the first-ever BGMI Tournament in college with 300+ participants.
- Represented school at state-level cricket and chess competitions.
