- Created LWC components to facilitate downloading of the form to report Product Quality Complaints and Adverse Events.
- Created Permission Sets and Profiles as part of Salesforce configuration.
- Implemented free Salesforce Integration profiles for the integration which resulted in freeing up the Salesforce licenses.
- Established integration of the Veeva CRM, Veeva Vault, Veeva Network with MIC.
- Established integration between the OKTA SSO and Salesforce.
- Created triggers and handler classes to implement escalation of request based on different business hours by considering the holidays specified under the business hours.
- Collaborated development and support team to troubleshoot and resolve issues.
- Part of deployment team to deploy different solutions through ALM and Change set.
- Working on Incidents and Service Requests to support application.
- Data migration to move old medical inquiries to new system as part of application change.

- Designed and implemented FLOWS to automate business processes and enhance user experience.
- Managing and maintaining SDLC documents as part of release cycles in line with GxP procedure.
- Carried out the Periodic Review of system as part of GxP procedure.
- Analyzing the Salesforce Releases and implementing changes as per the need based on Release notes analysis.
- Analyzing the MIC Release notes and implementing changes as per the need.
- Created Scheduled class to delete the data every month.
- Created Validation rules as per business requirements.
- Implemented Restriction Rules to hide some functionality for specific users of specific regions based on their profile.
- Hands on Experience on debugging and finding out errors using Debug Logs.
- Creating and updating Lightning Record Pages and Page Layouts of various objects as per the business requirements.
- Updating bulk data using Salesforce Data Loader and Salesforce Inspector.
- Setting up Queues to share the List Views with specific set of users.
- Providing hyper care support as part of deployment cycle.
- Managed the work activity of the Support team.
- Participated in daily standup meetings with system owners and business process owners.
- Working with client and business stake holders on different requirements.
- Utilized JIRA and Service Now for incident management and tracking.
- Creating and managing Normal and Standard Change Requests on SNOW as per GxP process to deploy the changes.
- Managed Sandbox Org refresh activities.

Project: Medical Information Website

An Experience Site available for guest users to search contents like text, pdf, ppt and video files.

Client: Biogen (Tata Consultancy Services Ltd.)

Duration: March 2023 – Till Date

Project Description: Support and enhancement of the Medical Information Website.

Roles and responsibilities: Support and Enhancement of Salesforce Digital Experience Site.

- Experience of working and maintaining the Salesforce Digital Experience Site.
- Creating Lightning Components for the Digital Experience Site.
- Adding various Products to the system which helps users to search for the specific product related documents.
- Integrated Salesforce with Amazon AWS to fetch documents stored on S3 bucket and to implement keyword search functionality using Amazon CloudSearch API.
- Managing CA-Signed certificates used for the site.
- Debugging the LWC to identify the issue.
- Managing the licenses used for the Digital Experience Site domain.
- Analyzing the Salesforce Release Notes and identifying its impact on the org.
- Mass deleting records using Data Loader and Apex.

Project: Salesforce Sales Cloud

A sales application to manage the leads and opportunities efficiently.

Client: Brunswick Corp. (Tata Consultancy Services Ltd.)

Duration: Dec 2021– March 2023

Project Description: Tech. Debt Reduction of an application based on Sales Cloud.

Roles and responsibilities: Development and Tech Debt reduction of the Salesforce org which was based on Sales Cloud.

- Merging and converting the workflow rules to flows based on the criteria.
- Merging multiple workflow rules into a single flow based on the criteria and complexity.
- Creating new Flows based on the user requirements.
- Merging multiple triggers into one trigger per object following the best practices and standards.

- Implementing handler classes to accommodate Trigger logic.
- Updated the apex classes and triggers to follow the best industry practices and standards.
- Configured the page layouts and security settings to optimize the user experience and data protection.
- Analyzing and removing the unused custom fields, record types, page layouts and roles from the Salesforce Org.
- Provide technical assistance and end user troubleshooting for bug fixes and enhancements.
