Summary

Results-driven AI/ML Engineer with 2 years of experience, holding a CPAT (Certificate Program in Algorithmic Trading) certification. Proficient in Python, C++, and leading cloud platforms, with a strong foundation in designing and developing scalable AI-driven applications. Specialized in developing cutting-edge Generative AI solutions, including Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG).

Skills

- **Generative AI:** Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP)
- **Programming Languages:** Python, C++/C, R
- **Cloud Platform:** Azure, AWS SageMaker
- **Database:** SQL, PostgreSQL
- **Version Control:** Git
- **Algorithmic Trading**

Education

Dublin City University, Dublin , MSc in Computing (AI)	2022 – 2023
International Institute of Information Technology, Pune , BE in Computer Engineering	2016 – 2020

Experience

- AI/ML Engineer**, Univitt AI Technologies Private Limited – Karjat, India Feb 2025 – Present
- Built and deployed a sales analytics platform with an MCP-powered chatbot and interactive dashboard, enabling 25% faster decision-making through real-time SKU analysis using Python and PostgreSQL.
 - Designed and implemented a demand forecasting system by training and ensembling 8 ML/DL models, accurately predicting sales for a crop protection company operating across India, resulting in improved inventory planning and a 20% reduction in stockouts.
 - Led and mentored an intern to design and deliver a Power BI dashboard for a charity initiative, enabling real-time visualization of donations, volunteer data, and impact metrics, which improved stakeholder reporting efficiency by 35%.
- Software Engineer**, Xoriant Solutions Private Limited – Pune, India Nov 2020 – July 2022
- Cut manual reporting time by 40% by designing and implementing a cloud-based financial dashboard using MSSQL and Power BI, providing stakeholders with real-time financial insights.
 - Improved healthcare logistics efficiency and reduced response time by 25% in the medical transport industry by developing a real-time tracking application that continuously monitored temperature and geolocation of pharmaceutical delivery vehicles.

Projects

- Fraud Detection in Bank Transactions** (2024)
- Built a real-time fraud detection model on a dataset of 6M+ transactions, achieving 80% accuracy and demonstrating strong potential for scalable financial security applications via a Flask-based API.
- Smart Document Assistant for Financial Data** (2024)
- Automated financial news analysis by developing an AI-powered assistant that performs information retrieval, abstract summary, and sentiment analysis using Hugging Face Transformers and FAISS-based semantic search.

Certificates and Achievements

- CPAT – Certified Program Algorithmic Trading
- Open-Source Software Development, Linux and Git Specialization
- Generative AI with Large Language Models
- Google IT Automation Certification
