

Vasu Dev Yadav

Software Developer

vasudev46663@gmail.com | +91 7838390900

LINKEDIN | LEETCODE | HACKERRANK | GFG

Enthusiastic Software Developer having over 2 years of experience. I am seeking a role, which would utilize my true potential while giving me the room to learn and expand my skill set, eager to embrace new opportunities and contribute to organizational success.

Education

- NEHRU WORLD SCHOOL

Class X CBSE	9.4 CGPA	2016
Class XII CBSE	84%	2018
- JSS ACADEMY OF TECHNICAL EDUCATION

B.TECH EE		
CGPA: 7.36	June 2018 – June 2022	

Skills

- PROGRAMMING LANGUAGES
Python, Apex, Javascript
- LIBRARIES/Frameworks
LWC
- TOOLS/PLATFORMS
Salesforce CRM, Debugging in Apex, SOQL, Salesforce flows, Quickworks, Mulesoft.

Experience

DMI FINANCE | SOFTWARE ENGINEER

Delhi, India

June 2022 - Present

DMI Finance is a non-banking financial company in India with core businesses in corporate lending, housing finance, digital consumer and MSME finance.

- Working as a Member of the Integration team to develop smooth onboarding journey of customers through multiple channel partners.
- Modified apex classes, flows and triggers to implement business logics. Configured Validation Rules, Custom objects, and Custom settings to enhance and automate business process flow and reducing manual work
- Reduced hard coded checks making code more configurable, reducing development time and increasing development ease.
- Responsible for designing and developing easy-to-scale generic quickworks and Mulesoft APIs.
- Worked with Multiple partners like GooglePay, Samsung and Shopse directly to understand requirements and implemented generic solution to work in sync with existing processes.
- Responsible for sorting and documenting existing functionality for easier feature enhancements.
- Made critical decisions of platform selection amongst Salesforce, Mulesoft, and Quickworks after careful understanding of critical requirements from various partners

Projects

Partner Integrations (Quickworks, Salesforce flows, Apex, Apex debugging)

- Integrated multiple partners like Shopse, MyHealthCare, Delhivery and SunMobility, with different challenges for each one, had direct interaction with partners deducing and forming solutions to unique problems.
- Successfully integrated a new generic process to send customer a text message to continue their Loan application journey after customer registered themselves on POS.

Feature Implementation for existing Partners (Apex, Apex Debugging, MuleSoft, Quickworks)

- GooglePay - Created a new API for GooglePay using Mulesoft to facilitate customer ease while creating a new application, the API would allow to add address at a later stage, eliminating the chance of customers dropping off.
- Airtel - Developed a polling API using Quickworks, to fetch urls of pdf files from partners at delayed intervals, ensuring continuous operation of applications, without manual intervention.
- Samsung - Created a new process to automatically assign processing fees and other charges as per product model and tenor selection by the customer.

Deployment Time reduction for Integration team (Apex test class, apex debugging)

- Wrote/fixed multiple test classes to smoothen out the deployment process from 2 hours of full validation to 5 minutes in specific validation,
- Created a data generation class to shorten the length of test classes, and remove repetitive code.

Removal of Hardcoded checks in code with Salesforce Custom Object configurable, point and click based changes (Apex, Apex Debugging)

- Successfully led and removed over 30+ hardcoded partner checks, with configuration based changes, reducing development time and increasing ease of development.
- Zero downtime or incidents were seen during this major release of changes.

Achievements

- Received Star of the Quarter award (July 2023-Sept 2023)
- HackerRank 4 stars in Problem Solving.
- HackerRank 3 stars in Python Language Proficiency.
- 150+ problems on Leetcode.
- 110+ coding score on geeksforgeeks.
