PROFILE

Innovative and results-driven Software Developer with a passion for crafting efficient and scalable solutions. Proficient in various programming languages and technologies, with a strong foundation in software development methodologies. Known for collaborative teamwork, effective communication, and a commitment to meeting project deadlines. Ready to leverage expertise to drive excellence in software development at Cyntexa.

PROFESSIONAL EXPERIENCE

04/2023 – present
Jaipur, India

Cyntexa

Associate Software Developer

- Designed and developed custom Salesforce applications, leveraging Apex and Lightning components to meet unique business requirements and streamline workflows.
- Implemented Salesforce automation features, including Process Flows to automate business processes and enhance productivity.
- Developed Apex triggers to enforce complex business logic and ensure data consistency across multiple Salesforce objects.
- Created test classes and performed unit testing to validate Apex code functionality and maintain high code coverage, adhering to Salesforce best practices and coding standards.
- Implemented security controls and permissions in Salesforce, including role hierarchy, profiles, and permission sets, to ensure data privacy and compliance with security standards.

PROJECTS

Student Registration Management

- The client is an American-based educational institute that wants a system to manage its students' records according to the enrollment year.
- Designed a user-friendly interface using the Lightning Web Component (LWC) framework to display student enrollment information through an expandable accordion component.
- A data table component was developed to display student information from multiple objects including demographics, enrollment history, student names, classes, sections, performance ratings, and attendance records.
- Created filter criteria and search functionality for better user experience.
- Implemented navigation mixing to redirect users to individual student records for more detailed information.
- Utilized Apex triggers to seamlessly update the data table in real-time with platform events, ensuring data accuracy and efficiency.
- Imported 5 lakh student records in Salesforce through data loader.
- Created custom validation rules to ensure data consistency and integrity.

Salesforce and QuickBooks Integration

- The client is a non-profit organization based in Australia. They provide food, clothes and many other essential items to people who were affected by natural disasters like earthquakes, floods, drought etc. They collect donations from various sources and currently, they were using Quickbooks to generate the invoices/receipt of the donation received. The business requirement of the project was that the client wanted integration between Quickbooks and Salesforce bidirectionally to make the process of invoicing easier.

- Integrated QuickBooks with Salesforce by using best Salesforce practices.
- Implemented a two-way sync to get real-time data from both platforms.
- Created a webhook to get the data from QuickBooks to Salesforce.
- Created Two custom objects for the Account's Bill and Bill Payment (Customer from QuickBooks).
- Created a Sync button on the Account to retrieve the bills and payments made on those bills for the specific customer.
- A trigger was established to invoke the future method that generated entries for Quickbooks.
